

Variance under rigid transforms, guide relabeling, and arc phase shifts

lo, max Euclidean boundary distance, and max consecutive arc gap recomputed at 50-digit precision
ter each transform. All differences are 0 to working precision (red dashed line marks the frozen $1e-9$ tolerance).

Numerically cross-checked at 50-digit precision

d849 | Wolfram 15.0.0 | WorkingPrecision 50 | cross-language tol $1e-9$ | $n = 17$ invariance checks

|metric difference| (log; $1e-50$ floor)
