

Equal-arc coverage: $H^* = L^3/(12\text{ m}^2)$ and $G = L/m$ ($L = 10\text{ m}$, uniform density)

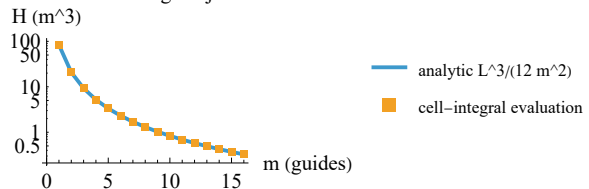

num derived symbolically from periodic Voronoi cell integrals; equal spacing

mal for $m = 2..6$ by Resolve. Uniform-density result only; it is not extrapolated to non-uniform densities.

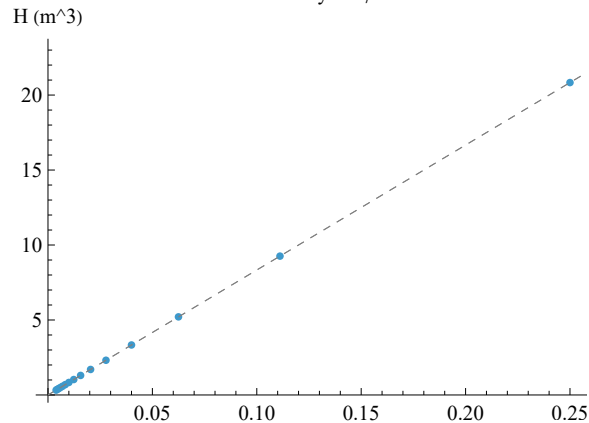

mbolically verified under stated assumptions (uniform density, equal spacing)

9 | Wolfram 15.0.0 | WorkingPrecision 50 | cross-language tol 1e-9 | $L = 10\text{ m}$, $m = 1..16$

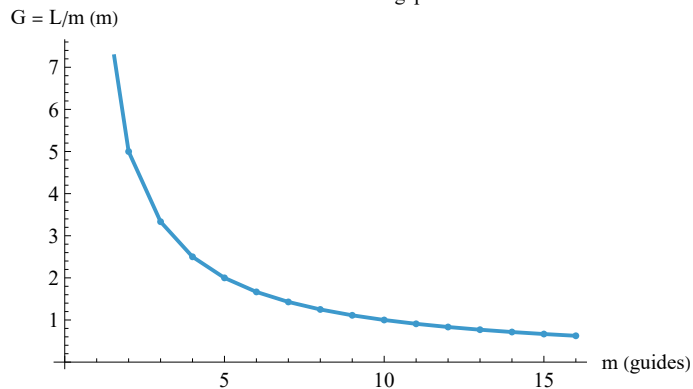

Uniform coverage objective

Linearity in $1/m^2$

Max consecutive arc gap

Residual (float64 roundoff scale)
